

Module STARK LLE 35-270-1250

Modules LLE ADVANCED

Product description

- Ideal for linear and panel lights
- LED system solution with outstanding system efficacy up to 114 lm/W, consisting of linear LED modules and dimmable LED Driver LCAI 080/0350
- Efficacy of the module up to 131 lm/W
- High colour rendering index CRI > 80
- Small colour tolerance MacAdam 3^①
- Small luminous flux tolerances
- Colour temperatures 3,000 K and 4,000 K
- Perfectly uniform light, even if several LED modules are used together in a line
- Push terminals for quick and simple wiring of LED module to LED module
- Simple installation (e.g. screws)
- Long life-time: 50,000 hours
- 5-year system guarantee on the complete product

Technical data

Beam characteristic	120°
Ambient temperature ta	-30 ... +55 °C
Typ. tp point	65 °C
Max. working voltage for insulation	500 V
Risk group (EN 62471:2008)	0
Classification acc. to EN 62031	Built-in
Type of protection	IP00

Ordering data

Type	Article number	Colour temperature	Packaging carton	Weight per pc.
STARK-LLE-G2-1250-830-CLA	28000140	3,000 K	200 pc(s)	0.045 kg
STARK-LLE-G2-1250-840-CLA	28000141	4,000 K	200 pc(s)	0.057 kg

① Integrated measurement over the complete module.

② Tolerance range for optical and electrical data: ±10 %.

③ Max. permissible repetitive peak current: 900 mA.

④ Max. permissible surge current: 1.5 A, duration max. 10 µs.

 EN 62471
 EN 61347-1
 EN 61547
 EN 55015

Photometric code

Key for photometric code, e. g. 830 / 339

1 st digit	2 nd + 3 rd digit	4 th digit	5 th digit	6 th digit
Code CRI	Colour temperature in Kelvin x 100	McAdam initial	McAdam after 25% of the life-time (max.6000h)	Lumen maintenance after 25% of the life-time (max.6000h)
7 67 – 76				Code Remaining lumen
8 77 – 86				7 ≥ 70 %
9 87 – ≥90				8 ≥ 80 %
				9 ≥ 90 %

Thermal design and heat sink

The rated life of LED products depends to a large extent on the temperature. If the permissible temperature limits are exceeded, the life of the LLE will be greatly reduced or the LLE may be destroyed.

tc point, ambient temperature and life-time

The temperature at tc reference point is crucial for the light output and life-time of a LED product.

For LLE a tp temperature of 65 °C has to be complied in order to achieve an optimum between heat sink requirements, light output and life-time.

Compliance with the maximum permissible reference temperature at the tc point must be checked under operating conditions in a thermally stable state. The maximum value must be determined under worst-case conditions for the relevant application.

The tc and tp temperature of LED modules from Tridonic are measured at the same reference point.

Mounting instruction

None of the components of the LLE (substrate, LED, electronic components etc.) may be exposed to tensile or compressive stresses.

Max. torque for fixing: 0.5 Nm.

The LED modules are mounted onto a heat sink with 2 screws per module. In order not to damage the modules only rounded head screws and an additional plastic flat washer should be used.

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

Materials which are used in LED applications (e.g. sealings, adhesives) must not produce dissolver gas. They must not be condensation curing based, acetate curing based or contain sulfur, chlorine or phthalate.

Avoid corrosive atmosphere during usage and storage.

**EOS/ESD safety guidelines**

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice. Please note the requirements set out in the document EOS / ESD guidelines (Guideline_EOS_ESD.pdf) at: <http://www.tridonic.com/esd-protection>

Heat sink values**LLE**

ta	tp	Forward current	R _{th, hs-a}	Cooling area
25 °C	65 °C	300 mA	6.6 K/W	99 cm ²
25 °C	65 °C	350 mA	4.9 K/W	132 cm ²
35 °C	65 °C	300 mA	4.9 K/W	132 cm ²
35 °C	65 °C	350 mA	3.7 K/W	176 cm ²
45 °C	65 °C	300 mA	3.3 K/W	198 cm ²
45 °C	65 °C	350 mA	2.4 K/W	265 cm ²
55 °C	65 °C	300 mA	1.7 K/W	396 cm ²
55 °C	65 °C	350 mA	1.1 K/W	529 cm ²

Notes

The actual cooling surface can differ because of the material, the structural shape, outside influences and the installation situation. Depending on the heat sink a heat conducting paste or heat conducting film might be necessary to keep the specified tc temperature.

Thermal behaviour

storage temperature	-40...+85°C
operating temperature t_a	-30...+55°C
t_p (at typ. current)	65°C
t_c max. (at typ. current)	85°C
max. humidity*	0...80%

* not condensating

Lumen maintenance

t_p temperature in °C	forward current in mA	luminous flux in %	operating time in h
65	300	80	25.000
		70	55.000
		50	> 100.000
	350	80	20.000
		70	50.000
		50	> 100.000

Selection of the LED Driver

LLE can be operated either from SELV LED Drivers or from LED Drivers with LV output voltage.

LLE are basic isolated against ground and can be mounted directly on earthed metal parts of the luminaire also when used in conjunction with the LED Driver LCAI 080/0350. In this case the light emitting side of the module has to be protected against direct touch (test finger). This is typically achieved by means of a non removable light distributor over the module.

Electrical supply/choice of LED Driver

LLE modules from Tridonic are not protected against overvoltages, overcurrents, overloads or short-circuit currents. Safe and reliable operation can only be guaranteed in conjunction with a LED Driver which complies with the relevant standards. The use of LED Driver from Tridonic in combination with LLE modules guarantees the necessary protection for safe and reliable operation.

If a LED Driver other than Tridonic is used, it must provide the following protection:

- Short-circuit protection
- Overload protection
- Overtemperature protection

LLE modules must be supplied by a constant current LED Driver. Operation with a constant voltage LED Driver will lead to an irreversible damage of the module.

Wrong polarity can damage the LLE.

With parallel wiring tolerance-related differences in output are possible (thermal stress of the module) and can cause differences in brightness. If one module fails, the remaining modules may be overloaded.

Wiring

Wiring examples

Wiring type and cross section

The wiring can be solid cable with a cross section of 0.2 to 0.75 mm². For the push-wire connection you have to strip the insulation (6-7 mm).

Inserting stranded wires / removing wires by lightly pressing on the push button.

Relative luminous flux

The diagrams are based on statistic values.
The real values can be different.

Optical characteristics LLE

The optical design of the LLE product line ensures optimum homogeneity for the light distribution.

Light distribution

The colour temperature is measured integral over the complete module. The single LED light points can have deviations in the colour coordinates within MacAdam 7.

To ensure an ideal mixture of colours and a homogenous light distribution a suitable optic (e. g. PMMA diffuser) and a sufficient spacing between module and optic (typ. 6 cm) should be used.

For further information see Design-in Guide, 3D data and photometric data on www.tridonic.com or on request.

Coordinates and tolerances according to CIE 1931

The specified colour coordinates are measured by a current impulse with typical values of module and a duration of 100 ms.

The ambient temperature of the measurement is $t_a = 25\text{ }^\circ\text{C}$.

The measurement tolerance of the colour coordinates are ± 0.01 .
